Making Every Job A Masterpiece!

STANDING SEAM STEEL ROOFING • STEEL SHINGLES BY METRO

WE STAND BEHIND ALL OUR WORK!

Since 2010 Masterpiece Metals has been striving to protect your investment with Standing Seam Steel Roofs. In the spring of 2016 we added Stone Coated Steel Shingles to our product line which we are very excited to offer!

In 2010 we bought our first Roll Former and started offering Standing Seam Metal to contractors & home owners. With many learning experiences we have grown to 2 new & better Roll Formers in 2015 & 11 employees to serve all your Standing Seam and Steel Shingle needs.

We want to thank past and future customers for all the business they have given us.

Larry Schlabach

WARRANTY

We now offer a limited lifetime warranty on all products (unless specified).

This warranty is non transferable.

Limited Lifetime is only for original owner.

*Thank you & your wonderful crew for doing a great job on our new roof. We are both very pleased & will spread the word. Your men were great! They are great workers. Please let them know we appreciated what they did.
Thank you again!*

The Ernsbergers

*I am so pleased with our new roof! The crew did a wonderful job. I was impressed with how clean they kept the job site and how conscientious they were about all the little details. I'm especially happy with how nicely they sided and roofed the little cupola over the garage and they did a great job adding a slope to my porch roof.
Please extend my thanks to them.*

BEST SELLER!

1" SNAPLOK PROFILE

Our 1" Snaplok profile is our most popular residential panel. It is a low profile panel combined with our low profile trim system resulting in beautiful yet durable to withstand anything Mother Nature sends our way. This profile really creates a nice curb appeal combined with weather tightness to last for years to come! This affordable panel is a standout in any neighborhood.

Reasons why metal roofs are the roof to put on your house

- Longevity
- Durability
- Low Maintenance
- Curb Appeal
- Savings on *Cooling or *Heating
- You own the roof instead of "renting" it until it wears out.

* Depends on houses, ventilation, etc.

1½" SNAPLOK PROFILE

Our 1½" Snaplok profile is similar to our 1" profile but with more defined seam lines. Used on residential or commercial buildings, it will bring beauty to any project. This panel's weather tightness and performance will add value to your next project, assuring you of longevity & durability that's a known fact in metal roofs.

Leaving Shingles On Versus Tearing Them Off

You can leave your shingles on & go right over them with the metal if the shingles are not curled or there is only one layer of shingles. More than one layer of shingles is NOT a good idea to go over. Your screw for your new metal roof has less hold when going through more than one layer and weight on the roof is an issue. If any decking needs to be replaced we need to tear off shingles of that section or the whole roof to fix it properly.

1¾" SNAPLOK PROFILE

Our 1¾" Snaplok profile is a bigger profile. Better suited for light commercial & agricultural buildings. This panel has a clip system making it ideal for longer runs, allowing it more movement. With its taller ribs, it is also better suited for low sloping roofs where water could be an issue.

Frequently Asked Questions

"How noisy is it when it rains?"

Answer: There is no noise increase over the existing roof. The reason for that is because of the insulation we have in our attics deadens the sound.

"Will my new metal roof attract lightning?"

Answer: No. Studies show that lightning will still hit the highest point

METRO SHINGLE®

A Green Roof Product Designed For The Future

Metro panels are made from the world's most recycled material – Steel!
Creates a sleek, clean roof line using the incredible strength of modern stone-coated steel.
Withstands high winds & hail. Will easily outlast and outperform traditional asphalt shingle roofs and are backed by Metro's 50-year limited material warranty.

That means total security for your home from the top down!

Our steel shingles are a new product to Master-piece Metals. We are excited to offer this new product that has the look of a shingle yet the durability & longevity of steel, which is the core of this product.

With its "Shingle Look" & 50 year warranty it complements any house while assuring you a roof for generations to come!

Synthetic Roof Underlayment

FelTex is among the safest, strongest, and best-performing roof underlayments on the market. It balances strength and weight, provides dynamic steep-slope traction, and will not buckle, warp or crack. FelTex is rated for commercial and residential applications using roofing nails (3/8-inch head), and is an ideal underlayment for asphalt, shingles, metal, tile, slate, and a variety of sloped roofing materials. Two skid resistant surfaces include the proprietary Fiber Claw® top and a deck grabbing rubberized bottom. These surfaces along with unmatched strength and durability make FelTex an ideal steep slope underlayment choice. Whether you're working on a FelTex-protected roof, or living underneath one, you'll appreciate FelTex's quality.

Hail Rated: FelTex has a Class 4 hail rating (UL 2218) and may help reduce insurance costs.

Strongest: FelTex is designed for high traffic and high winds with the most strength and durability available.

Won't Buckle, Warp or Crack: Superior lay-flat properties and water resistance keeps FelTex from warping, wrinkling, and cracking in cold weather.

Asphalt Free: FelTex is 100% inorganic and will not rot or mold.

Sustainable: FelTex is environmentally responsible and may contribute to your LEED and NGBR ratings.

Ventilation

Ventilation is a huge factor in saving you money on heating and cooling your home. With a new metal roof that has less heat penetration and good ventilation you have a combination that will save you on your energy bills.

Why is ventilation an important part of the roofing system? According to Roofhelp.com:

"Proper attic ventilation extends the life of a roof and reduces problems because it minimizes the temperature differential between the attic and the air outside. Proper ventilation will remove moisture and heat from the attic. Trapped heat and moisture can raise energy costs, cause ice dams, and damage roof system components as well as structural and personal items located inside the attic where temperatures can easily reach 150 degrees. In some cases the condensation can be bad enough to be mistaken for a roof leak.

*Just a small note to say 'Thank You!' for making it all good.
We need more businesses like you. Awesome service! And most of
all, thanks to the men that did my gutter.*

*Thank you so much for your expert craftsmanship
in installing our new steel roof.
We love it!*
